

List 组件调用说明

引入

```
<link rel="stylesheet" href="../../src/components/list/list.css">
<div id="list-demo"></div>
```

```
import {renderList} from "../../src/components/list/List.js";
import {createDetailRows} from "../../src/detail/detail.js";
```

React 工程：

```
import {ReactList} from "../../src/components/list/List.react.js";
```

调用

列表模式：

```
const instance = renderList("#list-demo", model.list, {
  mode: "list",
  titleField: "label",
  valueField: "impact",
  onItemClick: item => {},
});
```

详情模式：

```
renderList("#detail", createDetailRows(model, entity, {type: "node"}), {
  mode: "json",
  numberPrecision: 4,
});
```

输入

```
{
  items: [
    {id, title, subtitle, value, color, raw}
  ]
}
```

也可以直接传任意对象作为详情数据。

API

- `update(data, options)`
- `showDetail(data, options)`
- `destroy()`
